ThinkShield

GO AHEAD.
GO ONLINE.
YOUR HACKER
IS WAITING.

Shield your company.

"Free WiFi" sounds inviting. Who doesn't want to sit at the local coffee shop and get work done? But an unsecured connection also invites thieves, opening the door of your device—and your company—to devastating attacks.

ThinkShield by Lenovo is the first comprehensive security suite for business to include online security solutions. Your organization cannot ignore the mounting threats associated with network hacking. Give the bad guys an inch, and they'll take, well, everything.

- WiFi Security with Coronet® to ensure a safe connection
- BUFFERZONE online sandboxing to compartmentalize access and prevent hacking[2]
- Lenovo Endpoint Management powered by MobileIron® to keep on-the-go employees secure

75%
of organizations experienced phishing attacks in 2017.[1]

DON'T TAKE THE BAIT.

Lenovo WiFi Security with award-winning Coronet technology

- Performs a local risk analysis, and checks access-point details for vulnerability behaviors
- Warns users of suspicious behavior with "safe/not safe to connect" message
- Enterprise version allows for control via policy

Lenovo Endpoint Management powered by MobileIron®

- Unifies cloud and endpoint security across multiple devices
- Keeps sensitive information private, and enables "bring your own device" programs
- Allows companies to reach on-the-go employees while remaining secure

This is no time to compromise.
With ThinkShield by Lenovo, you won't have to.
